Dear Admissions Committee,

It is my pleasure to recommend Julie Duperron for admission to your Master's program. I had the opportunity to supervise her during her data science internship at the Department of Internal Medicine at the Poltava State Medical University. There, she assisted one of my PhD students, Viktoriia Myhal, on a research project on osteoporosis in women, serving as one of the most expert interns to round out the team. Julie displayed a nuanced understanding beyond traditional analyses. Her ability to integrate machine learning techniques with real-world biomedical data sets her apart from her peers and demonstrates her distinct value to our research efforts.

The analysis of the 88 women with hypertension and reduced bone mineral density in the conducted study was an iterative process, during which she did not hesitate to clarify her work accordingly to our demands and took feedback positively. For example, she provided visual interpretations of the regression results in graphs and specified her correlation results so we could fully leverage these calculations. Her critical thinking, problem-solving, effective communication, and leadership in team meetings consistently drove our work forward. Her contribution directly accelerated our project's progress, enabling us to publish our study the following year.

Throughout the internship, Julie Duperron demonstrated excellent analytical abilities, discipline, and initiative. Julie managed and analysed complex medical datasets and conducted advanced statistical modelling, including correlation and regression analyses, on Jupyter using Python. She then made her results available to our medical team on Microsoft Excel, making her deliverables visual and intuitive.

Notably, she travelled to Ukraine during wartime for a month to undertake her internship at Poltava State Medical University, showing exceptional courage and adaptability. She listened to our specific needs and, during our meetings, looked for detailed information about the datasets with composure and attention. She faced a significant challenge when she realised the dataset contained missing entries and inconsistencies, and immediately applied her knowledge to the data's particularities, offering a sharpened solution to the team. Her resourcefulness in using statistical models enabled her to bridge quantitative methods with biomedical understanding, making her a valuable team member from the outset.

In addition to her technical proficiency, Julie Duperron demonstrated strong intellectual curiosity and a willingness to expand her expertise in data science and medical research. She rapidly acquired working ability in both Ukrainian and Russian, underscoring her cultural adaptability. Julie consistently delivered highly accurate, reliable work, demonstrating professionalism and a deep commitment to quality in every task she undertook.

I am confident Julie Duperron has the ability and motivation to succeed in your Master's program and contribute meaningfully to your institution. If you need further information, please contact me at chn.med.ua@gmail.com or +380509125953.

Sincerely,
Natalia Chekalina, MD, Professor
